

THINKING BIG ON EFFICIENCY WITH AN HVAC CONTRACT FOR 11 MICRO-LABS

PROJECT DETAILS

Client

PA Consulting

Completed

Ongoing technical service contract

Oakland Business Line

HVAC Service

Objective

Maintenance of mechanical and electrical services and building fabric

PA CONSULTING IS A MANAGEMENT CONSULTANCY THAT SPECIALISES IN TECHNOLOGY AND INNOVATION.

The Technology Centre in Melbourn near Cambridge is housed in the award winning architectural bunker and completes work on science and technology development in purpose made laboratories.

Oakland Air Control has been associated with this site for several years. Our scope of work includes M&E maintenance covering HVAC, fire alarms, Trend Controls, water treatment, air compressors, standby power generation, lighting and lightning protection systems. We are also involved in general building fabric maintenance and electrical distribution board testing including Thermographic Surveys.

We are currently completing a HVAC project involving the installation of 11 new autonomous AHUs each served by Mitsubishi Electric heat pumps and Trend Controls. The new units supply the correct air flows and heating or cooling to serve a range of Category 2 laboratories and Class 10,000 clean rooms.
